### WARNING (KV-21X5L/KV-21X5U only)

The flexible mains lead is supplied connected to a B.S. 1363 fused plug having a fuse of 5 AMP capacity. Should the fuse need to be replaced, use a 5 AMP FUSE approved by ASTA to BS 1362, ie one that carries the mark.

IF THE PLUG SUPPLIED WITH THIS APPLIANCE IS NOT SUITABLE FOR THE OUTLET SOCKETS IN YOUR HOME, IT SHOULD BE CUT OFF AND AN APPROPRIATE PLUG FITTED. THE PLUG SEVERED FROM THE MAINS LEAD MUST BE DESTROYED AS A PLUG WITH BARED WIRES IS DANGEROUS IF ENGAGED IN A LIVE OUTLET SOCKET.

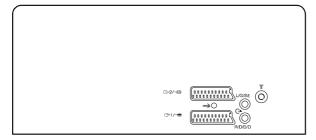

When an alternative type of plug is used it should be fitted with a **5 AMP** FUSE, otherwise the circuit should be protected by a **5 AMP** FUSE at the distribution board.

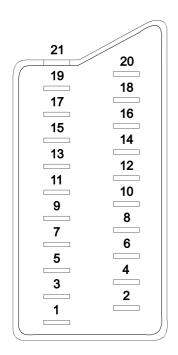

How to replace the fuse. Open the fuse compartment with a screwdriver blade and replace the fuse.

FUSE

To return to normal TV picture, press the  $\Box$  button on the remote

Note: To avoid picture distortion, do not connect equipment to the A and D connectors at the same time.

Plug in your headphones to the socket G on the front of the TV set. Connecting Headphones

We recommend you tune in the VCR signal to TV programme number '0' using the 'Manually Tuning in the TV' section of this instruction manual.

For Mono Equipment
Connect the phono plug to the L/G/S/I socket on the front of the TV
and select ÷2 input signal using the instructions above. Finally, refer to
the Adjusting the Sound section of this manual and select `A' on the sound menu screen.

## E E

Additional Information

# Here are some simple solutions to problems which may affect the picture and sound.

Problem		Solution
No picture (screen is dark), no sound	• •	Plug the TV in. Press the ① button on the front of TV.
	•	If the $\oplus$ indicator is on press $1/\oplus$ button or a programme number button on the remote control.
	•	Check the aerial connection.
	• •	Check that the selected video source is on.  Jurn the TV off for 3 or 4 seconds and then turn it
		on again using the © button on the front of the TV.
Poor or no picture (screen is dark),	•	Using the MENU system, select the Picture
but good sound		Adjustment display. Adjust the brightness, picture and colour balance
	•	revers.  From the Picture Adjustment display select →+ to return to the factory settings.
Poor picture quality when watching a RGB video source.	•	Press the ← button repeatedly on the remote control until the RCB symbol ← is displayed on the screen.
Good picture, no sound	•	Press the $\angle$ +/- button on the remote control.
	•	If $\not {\mathbb Q}$ is displayed on the screen, press the $\not {\mathbb Q}$ button on the remote control.
No colour on colour programmes	•	Using the MENU system, select the Picture
	•	Adjustment display. Adjust the colour balance. From the Picture Adjustment display select → + to
		return to the factory settings.
Distorted picture when changing programmes or selecting teletext	•	Turn off any equipment connected to the 21 pin Buro connector on the rear of the TV.
Remote control does not function	•	Replace the batterles.
Noisy picture when viewing TV channel	•	Adjust fine tuning to obtain better picture reception.
The standby indicator $\circlearrowleft$ on the TV flashes even though the	•	Contact your nearest Sony service centre.
wake op miler is not in use.		

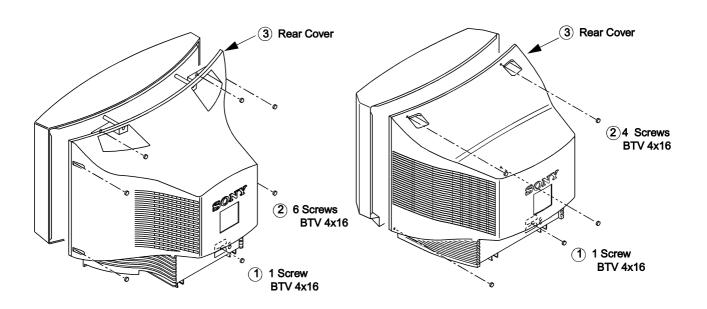

- If you continue to have these problems, have your TV serviced by qualified personnel.
   NEVER open the casing yourself.

Additional Information

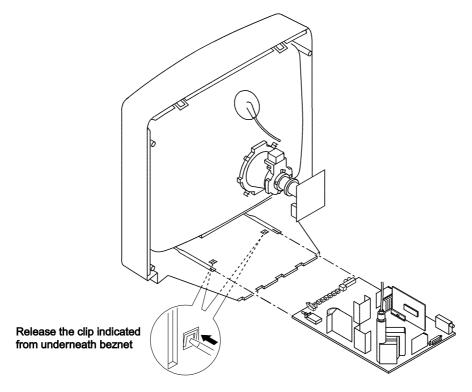

Connecting a VCR

### SECTION 2 DISASSEMBLY

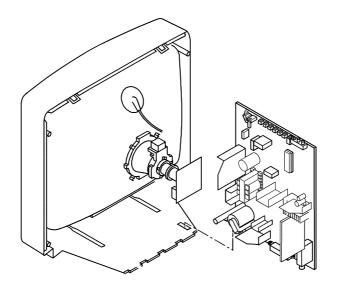

### 2-1. REAR COVER REMOVAL

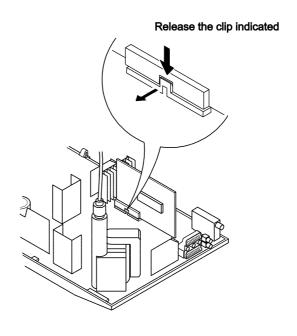

### 2-2. CHASSIS ASSY REMOVAL

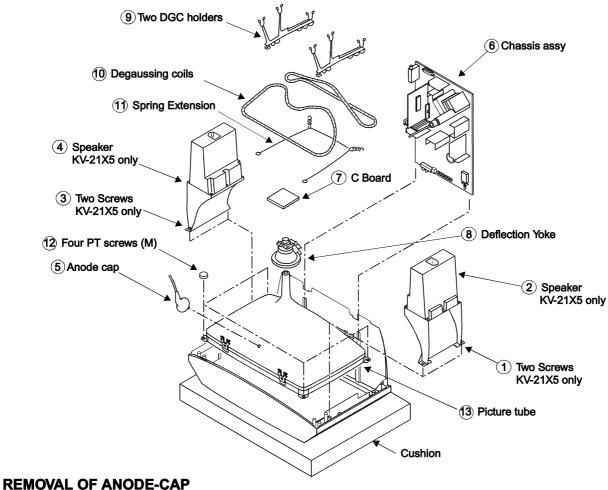

### 2-3. SERVICE POSITION

### 2-4. S1 BOARD REMOVAL

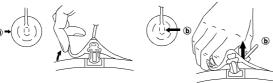

### 2-5. PICTURE TUBE REMOVAL

Note: Short circuit the anode of the picture tube and the anode cap to the metal chassis, CRT shield or carbon paint on the CRT, after removing the anode.

### \* REMOVING PROCEDURES.

- 1 Turn up one side of the rubber cap in the direction indicated by the arrow (a)
- 2 Using a thumb pull up the rubber cap 3 When one side of the rubber cap is firmly in the direction indicated by the arrow b
- - separated from the anode button, the anode-cap can be removed by turning up the rubber cap and pulling it up in the direction of the arrow ©

### **HOW TO HANDLE THE ANODE-CAP**

- (1) (2) To prevent damaging the surface of the anode-cap do not use sharp materials.
- Do not apply too great a pressure on the rubber, as this may cause damage to the anode connector.
- 3 A metal fitting called a shatter hook terminal is fitted inside the rubber cap. Do not turn the rubber foot over excessively this may cause damage if the shatter

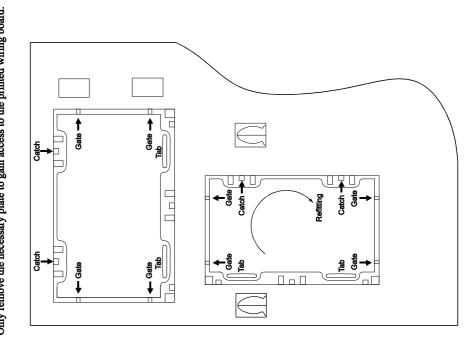

# REMOVAL AND REPLACEMENT OF THE MAIN-BRACKET **BOTTOM PLATES.**

# (1) REMOVING THE PLATES

In the event of servicing being required to the solder side of the A Board printed wiring board, the bottom plates fitted to the main chassis bracket require to be removed.

This is performed by cutting the gates with a sharp wire cutter at the locations shown and indicated by arrows.

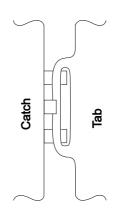

Only remove the necessary plate to gain access to the printed wiring board. Note: There are 2 plates fitted to the main bracket and secured by 4 gates.

## For safety reasons, on no account should the plates be removed and not refitted after servicing.

(2) REFITTING THE PLATES
Because the plates differ in size it is important that the correct plates are refitted in their original location.

Please note that the plates need to be rotated 180 degrees from the cut position to allow the tabs to be fitted in the catch positions.

### SECTION 3 SET-UP ADJUSTMENTS

- When complete readjustment is necessary or a new picture tube is installed, carry out the following adjustments.
- Unless there are specific instructions to the contrary, carry out these adjustments with the rated power supply.
- Unless there are specific instructions to the contrary, set the controls and switches to the following settings:

Contrast ...... 80% [or remote control normal]

Brightness ...... 50%

Carry out the following adjustments in this order:

- 3-1. Beam Landing
- 3-2. Convergence
- 3-3. White balance
- 3-4. Focus

Note: Test equipment required

- 1. Color bar/pattern generator.
- 2. Degausser.
- 3. Oscilloscope.
- 4. Digital multimeter.
- 5. DC Power supply.

### Preparation:

- In order to reduce the influence of geomagnetism on the set's picture tube, face it in an easterly or westerly direction.
- Switch on the TV set's power and degauss with the degausser.

### **3-1. BEAM LANDING**

- Input an all-white signal from the pattern generator.
   Set the Contrast and Brightness to normal.
- 2. Set the pattern generator raster signal to all Red.
- Move the deflection yolk forward and adjust with the purity control so that the Red is at the centre and the Blue and Green take up equally sized areas on each side of the screen.
   [See Fig.3-1 - 3-3].
- 4. Move the deflection yolk forward and adjust so that the entire screen becomes Red. [See Fig.3-1].
- Switch the raster signal to Blue, then to Green and verify the purity condition.
- When the position of the deflection yolk has been determined, fasten the deflection yolk with the screws.
- If the beam does not land correctly in all the corners, use magnets to correct it. [See Fig.3-4].

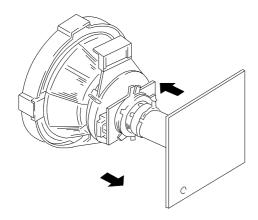

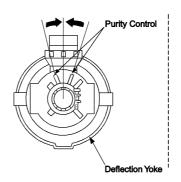

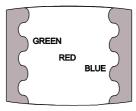

Fig. 3-1

Purity control corrects magnets or rotatable disk magnets correct these areas (a - d).

Deflection yolk positioning corrects these areas.

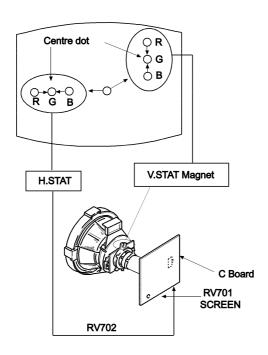

Fig. 3-4

### **3-2. CONVERGENCE**

### Preparation:

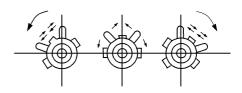

- Before starting this adjustment, adjust the focus, horizontal size and vertical size.
- Minimize the Brightness setting.
- Input a dot pattern from the pattern generator.

### (1) Horizontal and vertical static convergence

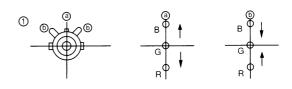

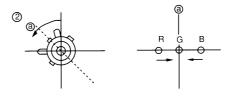

- [Moving horizontally], adjust the H.STAT control so that the Red, Green and Blue points are on top of each other at the centre of the screen.
- [Moving vertically], adjust the V.STAT magnet so that the Red, Green and Blue points are on top of each other at the centre of the screen.
- 3. If the H.STAT variable resistor is unable to bring the Red, Green and Blue points together at the centre of the screen, adjust the horizontal convergence with the H.STAT variable resistor and the V.STAT magnet in the manner indicated below. [In this case, the H.STAT variable resistor and the V.STAT magnet influence each other].

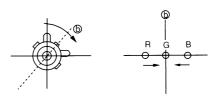

• Tilt the V.STAT magnet and adjust the static convergence by opening or closing the V.STAT magnet.

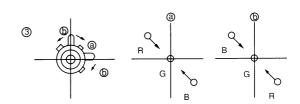

4. If the V.STAT magnet is moved in the direction of the (a) and (b) arrows, the Red, Green and Blue points move as indicated below.

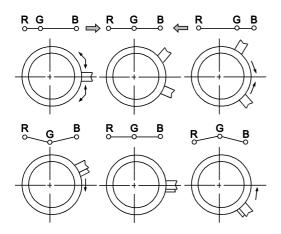

### (2) Operation of the BMC (Hexapole) magnet.

 The respective dot position resulting from moving each magnet interact, so be sure to perform adjustment whilst tracking.

Use the H.STAT VR to adjust the Red, Green and Blue dots so that they coincide at the centre of the screen [by moving the dots in the horizontal direction].

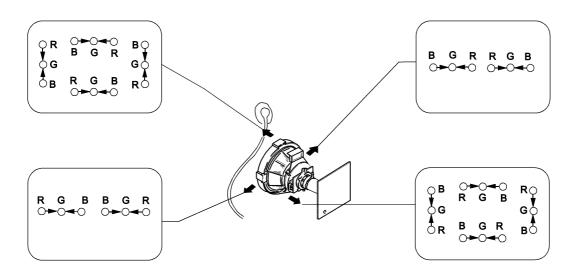

### (3) Dynamic convergence adjustment.

### Preparation:

- Before starting this adjustment, adjust the horizontal and vertical static convergence.
- 1. Slightly loosen the deflection yolk screws.

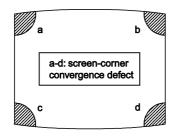

- 2. Remove the deflection yolk spacer.
- 3. Move the deflection yolk as indicated in the figure below and optimize the convergence.
- 4. Tighten the deflection yolk screws.
- 5. Re-install the deflection yolk spacer.

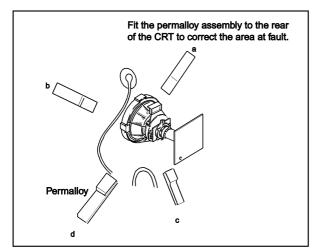

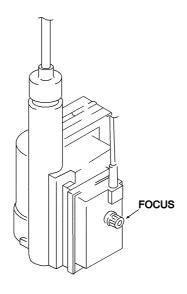

### (4) Screen corner convergence.

 If you are unable to adjust the corner convergence properly, this can be corrected by the use of permalloy assemblies.

### 3-3. Screen [G2], White balance

### **G2 Setting**

- 1. Input a dot signal from the pattern generator.
- 2. Set the Picture, Brightness and Colour to minimum.
- Apply 170Vdc from an external power supply to the R, G and B cathodes of the CRT.
- Whilst watching the picture, adjust the G2 control [RV701 SCREEN] located on the C Board to the point just before the flyback return lines disappear.

### White balance adjustment

- 1. Input a 'PAL' all-white signal from the pattern generator.
- 2. Enter into the Service Mode.
- 3. Enter into the 'Picture' service menu.
- 4. Select the 'Green drive' and adjust so that the White Balance becomes optimum.
- 5. Select the Blue drive' and adjust so that the White Balance becomes optimum.
- 6. Set the Picture to MIN.
- 7. Set the 'R-cut-off' to 07.
- 8. Adjust the 'G-cut-off', and the 'B-cut-off' so that the White Balance becomes optimum.
- 10. Press the \_ button to return to TV operation.

### **3-4. FOCUS**

- 1. Input a Phillips colour pattern
- 2. Set the picture settings to normal.
- Adjust the focus control located on the Flyback transformer to bring the centre of the screen into focus.

Note: Bring only the centre area of the screen into focus, switch to an all-white pattern and confirm that the magenta ring is hardly noticed. To obtain optimum focus balance the focus setting between optimum screen centre focus and a reduced magenta ring level.

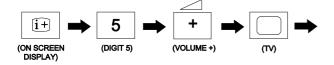

### SECTION 4 CIRCUIT ADJUSTMENTS

### **4-1. ELECTRICAL ADJUSTMENTS**

Service adjustments to this model can be performed using the supplied Remote Commander RM-883.

### **HOW TO ENTER INTO SERVICE MODE**

- Turn on the main power switch and enter into the stand-by mode.
- Press the following sequence of buttons on the Remote Commander.

- 'TT-' will appear in the upper right corner of the screen.
   Other status information will also be displayed.
- 3. Press 'MENU' on the remote commander to obtain the following menu on the screen.

TEST MENU

> Picture
Geometry
Sound
TV Status
AGC Adjust
Technical

- Move to the corresponding adjustment item using the 'Green' [up] or 'Blue' [down] buttons on the Remote Commander.
- 5. Press the 'Yellow' button to enter into the required menu item.
- Press the 'Menu' button on the Remote Commander to quit the Service Mode when all adjustments have been completed.

Note :The data shown in the 'TV STATUS' table is dependant on destination and country.

### **SUB BRIGHTNESS ADJUSTMENT**

- 1. Input a Phillips colour pattern.
- 2. Press 'TEST' 'TEST' 13 on the Remote Commander.
- Adjust the 'Sub-Brightness' data so that there is barely a difference between the 0 IRE and 10 IRE signal levels.

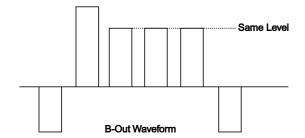

### **SUB CONTRAST ADJUSTMENT**

- Input a video signal that contains a small 100% white area on a black background
- 2. Set the picture control to maximum. ['TT01']
- 3. Connect an oscilloscope to Pin 1 of CN504 [A Board].
- 4. Enter into the 'Picture' service menu.
- 5. Adjust the 'R Drive' data to obtain the following waveform.

### SUB COLOUR ADJUSTMENT

- 1. Receive a PAL colour bar signal.
- 2. Connect an oscilloscope to Pin 3 of CN504 [A Board].
- 3. Enter into the 'Picture' service menu.
- Adjust the 'Sub Colour' data so that the Cyan, Magenta and Blue colour bars are of equal levels as indicated below.

Note: Ensure that no signal is applied to the Antenna socket while carrying out the following IF adjustments.

### SYSTEM B/G, D/K, I & L I.F ADJUSTMENT

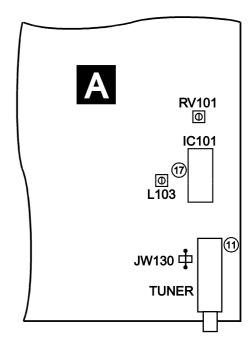

- Input a 38.9Mhz carrier signal at 100dBuV to Pin 11 [IF output] of the tuner [TU101].
- 2. Measure the voltage at Pin 17 of [IC101].
- 3. Adjust L103 [A Board] to obtain a voltage of 2.5V +/- 0.3V.

### SYSTEM L BAND 1 I.F ADJUSTMENT

- Input a 34.0MHz carrier signal at 100dBuV to Pin 11 [IF output] of the tuner [TU101].
- 2. Select 'system L' + C00 [channel 00].
- 3. Measure the voltage at Pin 17 [IC101].
- 4. Adjust RV101 [A Board] to obtain a voltage of 2.5V +/- 0.3V.

### **TUNER AGC ADJUSTMENT**

- Receive a signal of 65dBuV / 75 ohm terminated, via the tuner antenna socket.
- 2. Connect a voltmeter to JW130 [A Board].
- 3. Enter into the 'Test Menu'.
- 4. Select the 'AGC Adjust' menu item.
- Adjust the data using the Yellow and Green buttons on the Remote Commander to obtain a voltage of 3.0V +/- 0.2V.

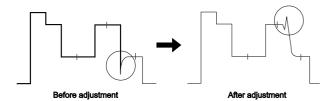

A Board component side

### BELL FILTER ADJUSTMENT (Secam models only).

Note: Ensure that the TV set has been powered up for at least 1 minute to allow for drift before carrying out the following adjustment.

- 1. Input a video SECAM Colour Bar signal via AV1.
- Connect an oscilloscope to pin 1 of CN504 [R-OUT] on the A board.
- 3. Enter into the 'Picture' menu and select 'Bell-f0'.
- Decrease the register of 'Bell-f0' until the following waveform change between RED and BLUE is obtained.

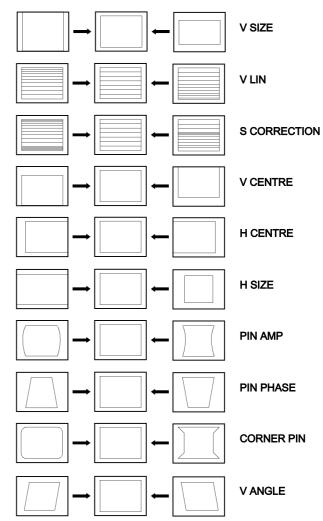

5. When the correct waveform has been obtained add an additional 7 steps to the register.

### **DEFLECTION SYSTEM ADJUSTMENT**

- 1. Enter into the 'Geometry' service menu.
- Select and adjust each item in order to obtain the optimum image.

### 4-3. FE-1 SELF DIAGNOSTIC SOFTWARE

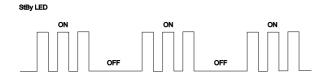

The identification of errors within the FE-1 chassis is triggered in one of two ways:-1: Busy or 2: Device failure to respond to IIC. In the event of one of these situations arising the software will first try to release the bus if busy (Failure to do so will report with continuous flashing LED) and then communicate with each device in turn to establish if a device is faulty. If a device is found to be faulty the relevant device number will be displayed through the LED (Series of flashes which must be counted) See Table 1., non fatal errors are reported using this method.

Each time the software detects an error it is stored within the NVM. See Table 2.

Table 1

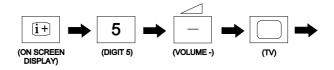

ERROR	LED ERROR COUNT
No еггог	00
Not allowed (may be confused with Sircs response flash!)	01
Protection circuit trip < ANY TIME >	02
Reserved	03
No vertical sync	04
AKB	05
IIC bus clock and/or data lines low at Power ON	06
NVM no IIC bus acknowledge at Power ON	07
Jungle controller no IIC acknowledge at Power ON	08
Tuner no acknowledge at Power ON	09
Sound processor no acknowledge at Power ON	10

### Flash Timing Example: e.g. error number 3

### How to enter into Table 2

- Turn on the main power switch of the TV set and enter into the 'Standby Mode'.
- 2. Press the following sequence of buttons on the Remote Commander.

The following table will be displayed indicating the error count.

Table 2

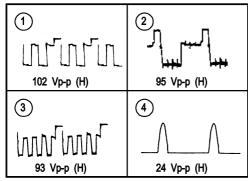

Error	Times
2	-
3	-
4	-
5	-
6	-
7	-
8	-
9	-
10	-

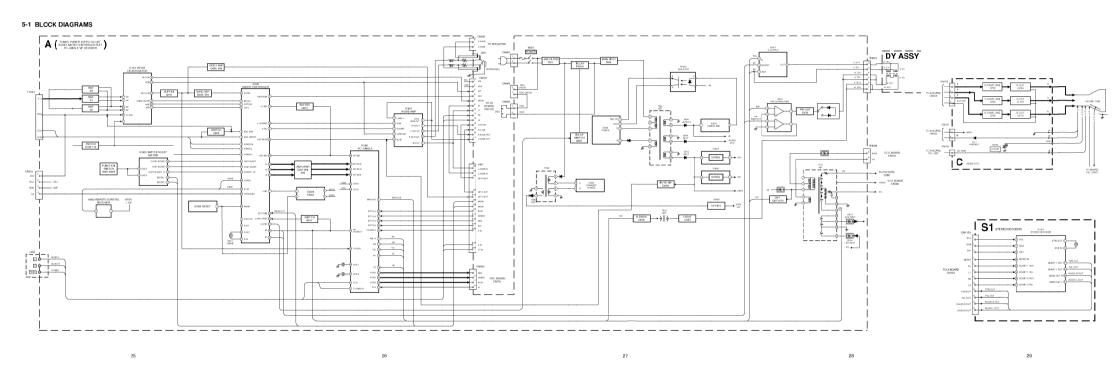

Note: To clear the error count data press '80' on the Remote commander.

### SECTION 6 EXPLODED VIEWS

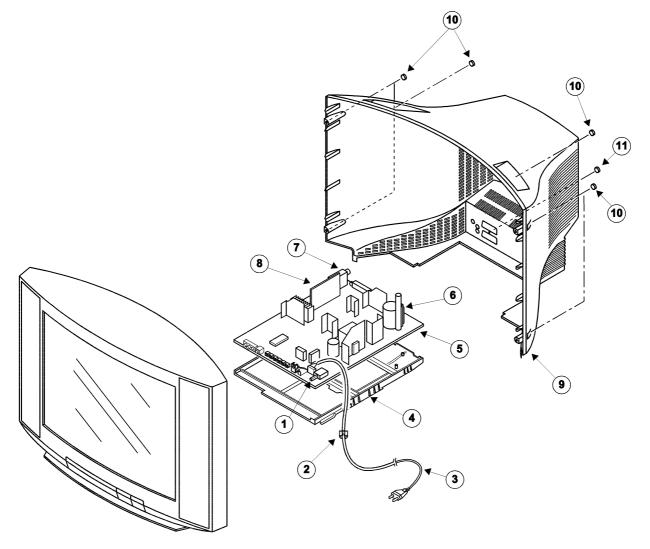

### NOTE:

- Items with no part number and no description are not stocked because they are seldom required for routine service.
- The construction parts of an assembled part are indicated with a collation number in the remarks column.
- Items marked " \* " are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.

Note: Les composants indentifies par une trame et par une marque △ sonte d'une importance critique pour la securite. Ne les remplacer que par des pieces du numero specifie.

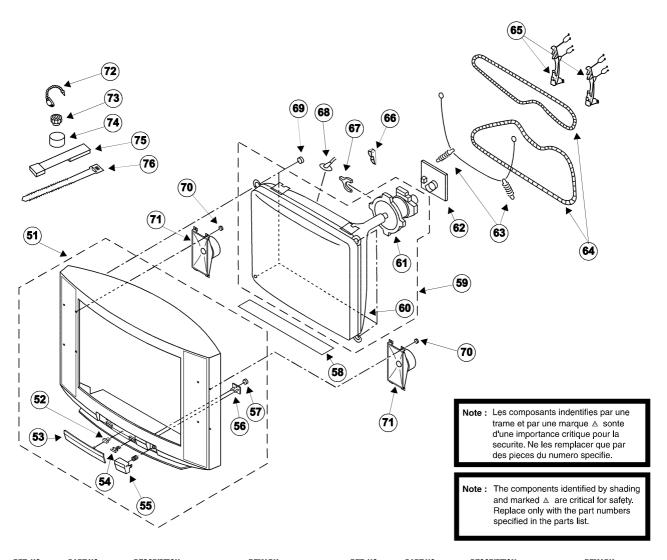

Note: The components identified by shading and marked △ are critical for safety. Replace only with the part numbers specified in the parts list.

#### SECTION 7 ELECTRICAL PARTS LIST

When indicating parts by reference number, please include the board name.

CAPACITORS COILS MF: mF, PF: mmF MMH: mH, uH

Items marked " \* " are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.

All variable and adjustable resistors have characteristic curve B, unless otherwise noted.

RESISTORS

All resistors are in ohms.

F: nonflammable.

Note: Les composants indentifies par une trame et par une marque △ sonte d'une importance critique pour la securite. Ne les remplacer que par des pieces du numero specifie.

Note: The components identified by shading and marked △ are critical for safety.

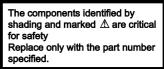

Replace only with the part numbers specified in the parts list.
